

New Database System

Multi Base

While many companies already have computer systems, many do not have the opportunity to realize their full potential. Multibase aim to help companies achieve the full potential of a computer system. To this end all of their products are extremely comprehensive, simple to use and understand.

Multibase has recently developed a new database system for ARCA. This database will keep records of the ARCA members, the training courses they attend and print training data cards and certificates.

In response to requests from companies within the asbestos industry Multibase has designed and built a computer system specifically with asbestos removal companies in mind. The database contains many features extremely relevant to the industry and incorporates them in a relatively inexpensive system which has no hidden extras or follow up payment once a system has been tailor made to your needs and specifications.

Caswell Environmental Services Ltd using the Multibase Asbestos Database. Mr Lee Caswell said: "Faster and more efficient procurement and sales service, which will see improved profit margins and cost savings to both company and client."

What should you expect from the purchase and installation of a Database?

The principle advantage to acquiring a database system will be a saving on time as well as financial savings, as many things can be instantly dealt with by a database. For example how much time and effort is expended keeping track of employees medical records and dates their medical certificates are due for renewal? Or how easy is it to track individual items of stock and plant and ensure they receive regular servicing or renewal? With a Multibase system a warning will automatically appear each day as the system starts and warn you of any situation that requires your attention.

The database also has the ability to hold easily accessible records for both clients and employees. Using a Multibase database you will easily be able to access your clients details for current and previous jobs whilst at the same time the addition of new clients can be handled in minutes and immediately stored onto the system, giving if need be multiple contact details for each client.

ASBESTOS COMPUTER SYSTEMS

Multi Base

Enquiries: Easy to use enquiry system, multiple quote capability for each enquiry detailing site and job description.

Jobs: Assign costs to each Job including Wages, Hire, Plant, Stock, Waste and Other costs. Complete financial reporting analysis in addition to measured term contract capabilities.

Employees: Full employee medical history including advanced warning of two yearly medical examination. Employee training courses and full asbestos exposure record detailing total fibre hours per location at the touch of a button. ****New Respirator Features****

Stock & Plant: Service history of all plant items, automatically warns when individual items require servicing. Track job history of each piece of plant including current location.

A dedicated computer system for the Asbestos removal industry, can be easily adapted to your specific requirements.
 Prices from £1,500 + VAT
 Free Demo version available on CD or down-load from our WWW Site. ****Demolition Database Available****

Employee screen on the Multibase Asbestos Removal Database System.

The employees record is equally easy to access, use and update. This record contains not only the basic details, name, date of birth etc, but also unique functions to keep track of employee medical records and as already stated will flash up a

warning when a medical is due. This coupled with the systems ability to calculate the total fibre hours for each employee, and print off an accumulated exposure report for any twelve week period has already proved it's worth within the industry. Similarly the system can be used to record employee safety and training courses and prompt you if any safety certificates etc, are due for renewal.

The Multibase system also encompasses a plant report which not only keeps track of each individual item of plant, its whereabouts, availability and service record, but will also prompt you when servicing is required for individual items. A similar report is included which deals with the whereabouts and service history of respirators again producing a warning when any item nears its required service date.

Stock control is another feature of the Multibase system. It offers automatic stock figure adjustment as items are assigned to jobs, or returned from jobs and allows an immediate stock take to be carried out and printed off, at any point in time.

On the more clerical side the Multibase system will deal rapidly with the entry of enquiries into the system noting the enquiry date, job description and site details. It is then easily possible to produce multiple quotes for a single enquiry. At the point a quote is accepted the click of a single button will turn it into an active job.

The system facilities also enable you to produce rapid cost break downs for jobs, covering items such as wages, plant hire, stock, waste charges etc, then view or print a full analysis including expected profit from each job.

A frequently required innovation is the ability to prepare measured term contracts for clients with the ability to group a number of jobs under one contract, a facility which comes into it's own when you have contracts with local authorities or such organizations.

The system can be used for basic clerical work such as producing labels for mail shots.

Multibase already supplies systems for a number of the industries leading companies. It is possible to tailor make a system that meets the requirements of particular companies, the basic database is supplied with 15 built in standard reports. The system is fully net workable allowing you to use several PCs on the same system and gives quick and easy access to all records stored.

Once installed, Multibase will provide on site staff training if required, which is supplemented by a complete and comprehensive help file built into the system. A full after sales technical support system exists for all Multibase customers which ensures they get the best service possible, and a peace of mind seldom to be found where computer systems are concerned.

Multibase currently carry out work for ARCA and other companies within the Asbestos industry. Their inside knowledge adds greatly to the ease with which they can understand and tailor a package to the need of the individual. They also supply and design a range of other dedicated databases including one for the demolition industry.

The Multibase Demolition Database in use at Clifford Devlin Ltd
